

# EndoVascular hybrid Trauma and bleeding Management (EVTM) Symposium

Örebro, Sweden, 2-4 February 2017

**The registration is now open!  
Abstract submission will open soon!**

**The first ever EVTM/REBOA international symposium!**

EndoVascular hybrid Trauma and bleeding Management (EVTM) is moving rapidly into clinical use. It includes adopting a multidisciplinary approach, early femoral vascular access (AABCDE), Aortic Balloon Occlusion (ABO or **REBOA**), angiography, embolization, and the use of stent grafts and hybrid surgical methods for bleeding control. EVTM can be used immediately on patient arrival, or in pre-hospital or battlefield scenarios.

We believe that EVTM is here to stay, and should be applied in all severe trauma and bleeding cases. This signals a paradigm shift within trauma and bleeding management. The EVTM symposium raises burning issues, and time will be devoted to **debate and open discussion**.

- REBOA - what do we know?
- REBOA penetration vs. blunt trauma
- Partial REBOA (pREBOA) vs. total REBOA (tREBOA), intermitted REBOA (iREBOA), and field transfer REBOA (fREBOA)
- Open vs. Endo bleeding management; endovascular and hybrid
- Who should do REBOA? When? Indications and training
- Vascular access: when and how?
- Complications
- From pre-hospital to ICU aspects of EVTM and multidisciplinary approach
- Human and experimental data; prospective and retrospective studies
- New technologies for bleeding control

Join the EVTM symposium for discussion and debate with us.  
February 2017, Sweden. Welcome!

On behalf of the symposium chairs and the local organizing committee,

## Tal Hörer

Dept. Of Cardiothoracic and Vascular Surgery and Dept. of Surgery  
Örebro University Hospital, Sweden
